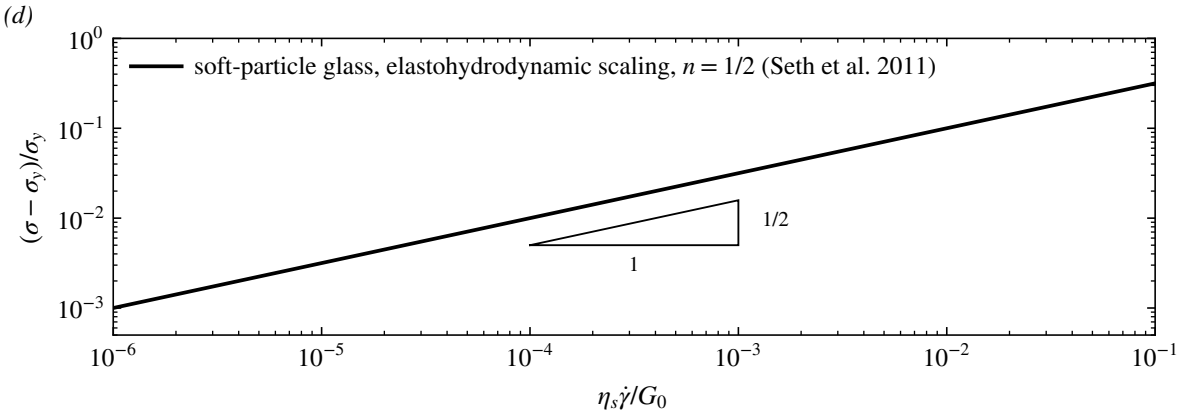
(a)
(b)
(c)
yield-stress matrix
Athermal jammed particles
(microgels, emulsions, foams)
Attractive colloidal gel
(clays, cement, flocculated sludge)
Non-colloidal particles in a
yield-stress matrix (concrete)



(d)
soft-particle glass, elastohydrodynamic scaling, $n = 1/2$ (Seth et al. 2011)
$(\sigma - \sigma_y)/\sigma_y$
$\eta_s\dot{\gamma}/G_0$
